BLANCO
GERMANY

Made to delight.

All the things BLANCO materials can do.

Excellence at first sight.

Perfection shows in the details.

You can always rely on a BLANCO sink centre in every respect.

Quality, precision and function are the most valuable asset of any sink or mixer tap. Technicians, developers, engineers and fitters work every day for your trust – with commitment, experience and passion.

BLANCO is one of the leading system providers of modern kitchen technology. The comprehensive offer of materials, installation options, colours and designs makes individual choice easy: with practical additional functions and modern designs, all perfectly matched to customers' requirements.

The following pages will tell you all about the various materials for BLANCO sink centres – and what makes them so advantageous.

Quality makes

the difference.

Always well advised with BLANCO.

The sink plays a major role in every home. It's where we spend 60% of our time in the kitchen. In order to make preparation, washing up, peeling and chopping as efficient as possible, sensible utilisation of the space, ergonomics and ease of care are tremendously important. BLANCO sink centres go a long way towards making work easier – with innovative functions and materials.

Naturally, all BLANCO surfaces are designed towards making daily use in the kitchen easier. Sinks in stainless steel, SILGRANIT® PuraDur® and ceramic are notable for their permanent good looks and excellent ease of care.

Stainless steel –
beauty in the
classic style.

Surface
finishes

BLANCO

BLANCO Satin Sheen. High sheen. A special polishing process creates a very smooth, satin-like surface. Satin polish is a key characteristic of exclusive bowls and sink models.

BLANCO Brushed Finish. Polished surface. This finish creates a homogeneous surface that – like the satin sheen surface – is easy to clean.

Looks and materials

Advantages

Properties

Care

Its special properties make stainless steel ideal for a sink centre. Thanks to its neutral colouration, it can be combined in many different ways and blends harmoniously with any kitchen environment.

More elegant with use. By current standards, it is not possible for a material to be totally scratch-resistant without extensive special treatment. Minor signs of use resulting from hard objects, such as ceramic knives, glass and stone, are part of the natural look of stainless steel. As use of the stainless steel sink increases, the patina that develops on its surface makes it increasingly strong and resistant.

First-class quality. This also applies to stainless steel: quality makes the difference! BLANCO only processes high-quality stainless steel that is carefully chosen and subject to strict quality controls.

The alloy specification has been subject to the DIN standard for decades. This ensures a consistent quality of the steel for production that complies with the standard.

Has stainless steel changed as a material in recent decades?

No. The stainless steel used by BLANCO has for decades been subject to the DIN standard. However, the many smooth surfaces in modern sink designs mean that the first signs of use become obvious sooner. This may create the impression that they are more delicate. As the amount of use increases, though, it also gives rise to a more harmonious, more homogeneous overall appearance with a higher degree of gloss, or sheen.

BLANCO Linen. Textured surface. Seen from a distance is slightly matt in effect. Minor signs of use are not obvious.

BLANCO
STEELART

BLANCO SteelArt Satin Sheen.

Exclusive, impressive sheen. The smooth, brushed linear finish is a little easier to clean and care for than Silk Matt.

BLANCO Natural Finish. The standard finish in the unpolished state. Optically matt with minimal texturing. Limescale is able to adhere to it more easily.

BLANCO SteelArt Silk Matt.

Exceptionally elegant combined with glossy silk bowls. A matt surface with an exclusive sanded finish.

Looks and materials

Advantages

Properties

Care

Purity and exceptional character.

Stainless steel sinks are easy-care and hygienic.

Every piece
a masterpiece.

Regular quality inspections and innovative refining processes allow every BLANCO stainless steel sink to become a unique quality product.

No room
for bacteria.

The surface of BLANCO stainless steel is smooth and pore-free. Not for nothing is stainless steel the material of choice in places such as catering kitchens and hospitals where hygiene has the highest priority.

Tough in
daily life.

High-quality BLANCO stainless steel has a natural resistance to common household acids (such as acetic or citric acid). Stainless steel is also resistant to the development of marks and stains caused, for instance, by coffee or certain types of fruit and vegetables.

How can stains be prevented from forming on the sink?

Most simply by rubbing the sink dry after every use. If any stains remain, use a standard commercial stainless steel cleaning agent that removes limescale. BLANCO also offers effective cleaning agents that are specially produced for the material.

Unity of fascinating properties.

Stainless steel is predestined for the good kitchen.

Looks and materials

Advantages

Properties

Care

For a glossy outlook.

Self-healing. Stainless steel is constantly renewing itself. The self-healing surface, known as the passive layer, regenerates constantly under the influence of oxygen.

Rustproof. Stainless steel is always rust-proof. Any flecks of rust that form on the surface are extraneous rust, and can easily be removed.

Retains values and taste.

Robust. Stainless steel is robust. Crockery that falls onto it will not necessarily break, and blows and impacts are slightly absorbed.

Neutral in taste. Stainless steel taints neither the appearance nor the flavour of food. It is safe for food use.

Stays resistant and resilient.

Resistant. Stainless steel is heat-resistant up to 300 °C. Even long periods of sunlight will not change its colour or texture.

Recyclable. Stainless steel is a sustainable material. It can be reused repeatedly, saving resources.

Looks and materials

Advantages

Properties

Care

Beauty care for a glossy radiance.

How to keep stainless steel permanently beautiful.

Daily cleaning.

Light dirt simply wipes off with a damp microfibre cloth or soft sponge. A standard commercial washing-up liquid or vinegar-based cleaning agent may be used. Wiping it dry every day will help to prevent stains and marks. This is the perfect way to prevent limescale, which dirt can easily settle on.

Removing limescale.

BLANCO's household tip against stubborn limescale: vinegar water (20% vinegar, 80% water) or water with a little lemon juice. Very stubborn limescale marks are easily removed with BLANCO ANTIKALK. Use BLANCO POLISH and a soft sponge to remove superficial rust.

Protection against the daily signs of wear.

The occurrence of minor traces of use caused by harder materials is natural on stainless steel and cannot be avoided. Superficial scratches simply polish off with BLANCO POLISH. Over time, though, a strong used surface is created known as the patina, and this becomes increasingly resistant to marks and damage with regular use and care.

Where do scratches come from in the first few weeks?

Stainless steel cannot be complete resistant to scratches. Initially, this may result in some slight usage marks. However, regular use and care will soon create a silky-matt, glossy, relatively strong work surface. Stainless steel products by BLANCO retain their value and brilliance for decades with the minimum care.

Looks and materials

Advantages

Properties

Care

Care product for stainless steel.

BLANCO ANTIKALK

Cleaning agent for BLANCO stainless steel surfaces.
Formulation specially designed for BLANCO mixer taps and sinks.

- Highly **effective removal** of stubborn limescale marks
- **Gentle** on all BLANCO mixer tap and sink surfaces
- Environmentally friendly because it's **biodegradable**

Item no. 513 605

BLANCO POLISH

Cleaning and care agent for BLANCO stainless steel sinks and worktops.
For deep cleaning every 1 to 2 weeks.

- Helps to remove **minor superficial scratches, rust** and stains
- Leaves a **silky-matt shine**
- Water just **rolls off** the surface after use
- **Prevents** finger prints and other marks and dirt from settling

Use BLANCO POLISH only in the brushing direction.
 Not to be used on Natural Finish, Linen Effect and Silk Matt stainless steel surfaces, or on chrome-finish surfaces and kitchen taps (see Page 6/7).

SILGRANIT® PuraDur® – the gemstone in the kitchen.

The sink is both an aesthetic eye-catcher and the most frequently used workplace in the kitchen. These claims can all only be met by a material that combines functionality, strength and modern design. A material like SILGRANIT® PuraDur®. The best SILGRANIT® PuraDur® ever stands for ease of care, resistance and smoothness, and is available in colours to match any kitchen environment.

Looks and materials

Advantages

Properties

Care

A touching experience.

SILGRANIT® PuraDur® – every touch is a pleasure. What makes it so special is the very finely-pored, closed surface of this granite composite material. It is the result of research and targeted orientation to the requirements of the modern kitchen. Out of that arose this unbeatable composite material for kitchen sinks.

The best quality that is also expressed in a huge range of models. Various style directions and designs mean that we have the right solution for almost every taste. BLANCO incorporates all its experience and competence here – for sinks that will be the gemstone in any kitchen.

Nine up-to-date CombiColours create the optically perfect base for the individual and stylish integration of BLANCO SILGRANIT® PuraDur® in the personal kitchen world.

Harmonious or full of contrast, the material perfectly matches almost any worktop design and requirement.

Advantages

Properties

Care

Always a step ahead.

Technical advantage for sustainable comfort.

Unbeatably
easy-care.

The surface roughness is reduced to the ideal level that dirt finds it almost impossible to cling to. This makes it very easy to care for, but is also a hygiene advantage.

Unbeatably
durable.

SILGRANIT® PuraDur® is notable for its fascinating mechanical and thermal resistance in any standard domestic application. To ensure this, BLANCO's Research and Development department carries out day-to-day load tests. The items also pass the strict quality checks by internationally renowned institutes.

Reassuringly
safe.

SILGRANIT® PuraDur® is finished with the patented protection formula "Hygiene+Plus". It gives the material antibacterial properties and is also dirt-repellent. This provides health safety and makes cleaning easier – water is able to roll down better, while dirt, limescale, stains and marks are reduced.

What is SILGRANIT® PuraDur® made of?

80% natural granite. The stone is then combined with an acrylic matrix, other minerals, ceramic components and colour pigments to give it its unbeatable properties.

Ready for any situation.

The natural strengths of a special material.

Looks and materials

Advantages

Properties

Care

Loads leave
no trace.

Invulnerable. Sharp kitchen tools and the standard domestic acids in foods and cleaners will not mark the surface. A saucepan dropping from normal working height will not normally affect the sink at all. SILGRANIT® PuraDur® is tremendously strong, scratchproof and unbreakable, and acid- and heat-resistant to 280°C.

Genuine – through
and through.

Neutral and durable. SILGRANIT® PuraDur® is suitable for use with food, fruit and vegetables can be prepared directly at and in the sink. SILGRANIT® PuraDur® sinks are solid dyed for extreme colour stability so they can be seen in the best light for many years to come.

Irresistibly
attractive.

Natural. SILGRANIT® PuraDur® not only looks good, but the material also feels fabulous. The finely-pored, closed surface achieves the perfect combination of stony and smooth – for a pleasantly natural feel.

SILGRANIT® PuraDur® with the patented hygiene protection formula

Looks and materials

Advantages

Properties

Care

Leaving only happy memories. This is how easy cleaning can be!

Light dirt.

Usually a damp cloth is enough. Light limescale marks can be removed with acetic acid or other standard commercial products that are intended for this material. We recommend BLANCO ANTIKALK to make light work of cleaning.

Stubborn dirt.

Discolouration and staining are caused by limescale that absorbs liquids such as coffee, tea, or red wine after drying. In some cases these marks may be removed by rubbing with the coarse side of a washing-up sponge, possibly with BLANCO ANTIKALK. BLANCO ACTIV was specially developed for the intensive deep cleaning of very dirty SILGRANIT® PuraDur® sinks. For the reliable removal of limescale and discolouration.

Dirt caused by other materials.

Due to the hard surface of SILGRANIT® PuraDur®, metal items such as saucepans may leave abrasion marks. This may be remedied simply with the coarse side of a washing-up sponge (and possibly a little hot water).

Looks and materials

Advantages

Properties

Care

Can the colours of SILGRANIT® PuraDur® sinks change?

No, not with normal domestic use. The material is dyed all the way through, which makes the colour extremely stable.

Cleaning products for SILGRANIT® PuraDur®.

Ceramic – the loveliest
combination of nature and design.

Flowing forms and the glazed surface of the BLANCO ceramic sinks give every kitchen a special character. Ceramic is a natural product that is created in a special process, and all the decades of our staff's experience are incorporated in it. Care and precision guarantee the consistently high quality of every single item.

Looks and materials

Advantages

Properties

Care

Simply functional – and simply beautiful.

Be it for the classic cottage style or a puristic kitchen design, as sink or undermount bowl, with a glossy or matt finish, BLANCO ceramic delights for its pleasant feel, delicate design, the closed, flowing surface and beautiful, bold colours. They set tasteful accents or underscore the harmonious integration in the surrounding area.

Modern production methods, special manufacturing techniques and the expertise of our skilled staff ensure that the quality of our ceramic range remains consistently high. Regular voluntary checks by the LGA confirm the high standards that we set ourselves, and guarantee products you can rely on unreservedly.

Due to the high density of the material and the highly developed processing technology at BLANCO, excellent functional product concepts can be realised with ceramic.

Looks and materials

Advantages

Properties

Care

Natural on principle.

Enjoy pleasant advantages with ceramic.

Superior ease of care.

BLANCO ceramic is naturally easy-care. This is due to the particularly hard, perfectly closed surface. This typical characteristic prevents dirt from penetrating, so usually a simple wipe is all it takes to clean it.

User-friendly plus.

BLANCO ceramic sinks with the special BLANCO PuraPlus® finish are extremely easy to clean. This special seal also helps to reduce limescale and other marks.

Impressively strong.

The exclusive production method leaves all BLANCO ceramic sinks with an extremely strong surface. Scratch protection, cutting and impact resistance all make everyday life in the kitchen much easier. Heavy kitchen utensils such as pots and pans falling from normal working height will not normally damage them.

Why are ceramic sinks so individual?

BLANCO ceramic sinks are made from natural raw materials using traditional craftsmanship. Every sink is unique; slight tolerances in the dimensions and colours are unavoidable.

The material in the best light.

Ceramic adds glowing moments to everyday life.

Looks and materials

Advantages

Properties

Care

Durable and
flawless.

Heat-resistant. Ceramic sinks are extremely resistant to the usual kitchen temperatures.

Scratch-free. The exclusive production method protects every BLANCO ceramic sink against the usual domestic scratches and stains.

Naturally
stable.

Acid-proof. BLANCO ceramic sinks are not sensitive to acids and lyes. Whether vinegar or lemon juice, the usual domestic substances will not damage them.

Neutral in taste. Thanks to the hard, closed surface, this natural material is hygienic and suitable for food use.

Hard-
wearing.

Impact-resistant. The blow and impact resistance of BLANCO ceramic sinks has been proven in standard domestic use for many years.

Non-fading. BLANCO ceramic retains its impressive full-tone colours even in direct sunlight.

Looks and materials

Advantages

Properties

Care

Always looks its best.

Leave a lasting impression in moments.

Light dirt.

Water and a little washing-up liquid are all that is required. Then a soft microfibre cloth will ensure that the surface is irresistibly lovely again. A mild vinegar-based or all-purpose cleaner can also be used.

Heavy dirt.

Very hard-working or dirty ceramic surfaces can be treated intensively yet gently with BLANCO CeraCare®. This biodegradable cleaning agent removes stubborn dirt and metal abrasions, grease and limescale. It cleans, polishes and preserves in one step.

Sealed at the works.

Refreshing the PuraPlus® seal on ceramic surfaces is achieved reliably with the BLANCO PuraPlus® Liquid Set. It contains a start for pre-cleaning and a liquid for regeneration. This fully restores functionality – water rolls down, and cleaning is easier.

Looks and materials

Advantages

Properties

Care

What is PuraPlus®?

PuraPlus® is a special water-repellent seal that causes water to simply run down the surface. This makes it more difficult for residues (e.g. limescale) to adhere to the surface, and so makes it easier to clean.

Cleaning agent for ceramic.

BLANCO CeraCare®

The all-in-one care for exclusive BLANCO ceramic.
Cleans, polishes and preserves in a single step.

- **Removes** dirt and metal abrasion on ceramic sinks
- **Dissolves grease and limescale**
- Organic ingredients **biodegrade** with ease

- **Highly effective removal** of stubborn limescale marks
- **Gentle** on all BLANCO mixer tap and sink surfaces
- Environmentally friendly because it's **biodegradable**

Item no. 513 605

BLANCO PuraPlus® Liquid Set

Restores the functionality of the user-friendly seal on
ceramic surfaces in moments.

- **Starter to pre-clean** the surface being treated
- **Liquid to regenerate** hard-working PuraPlus® surfaces

Item no. 512 494

BLANCO mixer taps – expression
of the highest standards.

The BLANCO mixer tap programme offers a wide range of models, finishes, materials, colours and features. The mixer taps are certified to the strict quality criteria of independent test institutes (such as DVGW and LGA). Voluntary checks guarantee the highest safety and hygiene for drinking water.

Looks and functions

Designs

Technology

Care

Experiencing harmony every day anew.

The mixer tap as the dispenser of our most important resource is also a source of quality of life. That is why BLANCO mixer taps are notable for their uncompromising quality that is evident even in the tiniest detail. As well as durability and easy operation, quality also means additional comfort that quickly becomes an essential daily benefit.

For many years, BLANCO has been addressing ergonomics and making working at the sink easier. The interplay with the right mixer tap creates a practical, perfectly matched functional unit – the BLANCO sink centre.

Whatever requirements are expected of the mixer tap, harmony with the interior or a specific sink material, special functions or the availability in fitted options – BLANCO has the solution.

Looks and functions

- elegant thanks to sophisticated brushing technology
- perfectly matched to exclusive BLANCO sinks and SteelArt products in stainless steel satin polish

Manganese

- surface created galvanically
- very pleasant velvety feel
- dark, elegant colouring

Quality out of responsibility.

BLANCO mixer taps provide safety.

Looks and functions

Designs

Technology

Care

Safety and protecting health are of the highest priority. For this reason, all the components in BLANCO mixer taps are made of high-quality materials. Water-conducting components are also tested and certified.

Dirt stays on the outside.

The BLANCO dirt filter holds back any dirt in the pipes, guaranteeing uninterrupted operation and long lifetimes for the mixer taps.

Ceramic prevents leaks.

The ceramic seals of the BLANCO cartridge are long-lasting, smooth in operation and pressure-resistant.

Water stays clean.

The integrated check valve prevents water from re-entering the mains system when the spray is in use.

Water is our most important resource. And that is why the latest materials and technology flow into BLANCO kitchen mixer taps. DVGW (German Association of Gas and Water Supplies) certification means that BLANCO mixer taps comply with one of the highest test standards currently available on the market. This ensures that the water is of excellent quality and that the mixer tap lasts for a long time.

TÜVRheinland®
LGA

Looks and functions

Designs

Technology

Care

Purity flows here. Mixer tap care in moments.

Light dirt.

BLANCO mixer taps in stainless steel or chrome and SILGRANIT® or ceramic look are easy and uncomplicated to clean. All that is required for their daily care is a soft cloth and clear water. Wiping the items dry will help to prevent limescale.

Heavier dirt.

BLANCO ANTIKALK eliminates stubborn limescale and marks. The formulation that is specially matched to BLANCO mixer taps and sinks cleans effectively while protecting the surfaces at the same time. Abrasive or aggressive cleaning agents must not be used.

Protection against limescale.

BLANCO mixer taps have been developed to be easy to clean, and are well-designed down to the tiniest details. This includes, for instance, the elastic silicone nubs on the spout – occasionally applying a gentle pressure to them will prevent limescale from settling.

Looks and functions

Item no. 513 605

High- or low-pressure mixer tap – what's the difference?

High-pressure mixer taps are the right choice in most cases. The mixer tap is fitted directly to the central water supply or to a continuous-flow water heater. A low-pressure mixer tap is only required if a boiler or hot water tank are used.

BLANCO installation methods –
top quality in every respect.

BLANCO offers lots of options for perfectly integrating the sink in the worktop. The installation method is both eye-catching and a matter of comfort, since important care properties need to be taken into account.

Many customers want a sink with a calm overall appeal. This effect is enhanced by a flat rim, which also makes cleaning easier. The IF flat rim is trailblazing – and a key feature of many BLANCO stainless steel sinks. **Flushmount sinks** create a single, smooth unit with the worktop. They appeal for their additional comfort and excellent hygiene:

Looks and technology

Advantages

Properties

Care

Build on individuality with BLANCO.

Installation from above

Classic installation from above with a conventional profiled rim that offers a wealth of options.

IF flat rim

Elegant, modern look thanks to the flushmount effect. Every IF sink model can be installed in two different ways: lay-on from above, or flushmount.

Flushmount installation

Visual harmony between sink and worktop with no irritating edges – functional and contemporary.

Undermount installation

Almost smooth installation from below for a modern, elegant look.

Undermount

Smooth, continuous installation of bowl and sink for a harmonious overall impression.

scraps can go straight into the bowl; nothing gets left behind or stuck in a gap. The **undermount installation** of the bowl adds a special accent to the sink centre. The worktop continues beyond the sink rim, which shows it to maximum optical and functional effect.

Undermount bowls and sinks are attached under the worktop, facilitating optimum use and care of the available worktop surface. Undermount bowls and sinks are also easy and unproblematic to clean.
